

## The most advanced design environment IBM i has ever seen

“

*Our latest development environment provides an unparalleled design experience for IBM i. We have focused on making it easier than ever to create high quality applications for everyone from smartphone users to desktop power users.*

- Brendan Kay, CEO of looksoftware.

*“It is immediately obvious that a lot of thought and effort went into newlook V10. Enhancements like multiple mobile device and custom form sizes, tight integration with RPG Open Access, and the improvements to the flow and workspace area will make modernizing applications even easier. Congratulations to looksoftware for making a great product even better.”*

*- Travis Riggins, CEO, TSR400*

## newlook version 10.1 – An introduction

newlook version 10.1 provides a significant number of enhancements that make designing and developing state-of-the-art IBM i applications a more seamless experience. The core principles forming the foundation of this release:

### Simplicity.

Through newlook's advanced designer tools, it's now easier to do a better job when designing forms. The experience of developing is more intuitive and common layout tasks have become simpler.

### Productivity.

Everything in newlook version 10.1 is tightly integrated and geared towards finishing projects more quickly and easily than before. You can develop for rich clients, mobile devices, browsers, RPG Open Access and non-OA, all from the same designer.

### Satisfaction.

We have made the Designer easier, provided more task-related feedback, and made it even more fun to work with. Many of the common developer tasks are simply a mouse click away.

## Advanced design tools

### State-of-the-art designer makes sophisticated form layout and advanced graphical development a breeze.

newlook version 10.1 is not only intelligent, yet even easier to use with added enhancements. Through automated smart-guides, rulers and enhanced toolbars, it anticipates what a developer is working on and helps with the process of designing forms. Further additions such as the hints system will make suggestions to help guide a developer intuitively through the design and layout process.

## newlook version 10.1 highlights:

- Support for Open Display File technology and forms
- Enhancements for looksoftware's openlook enabled applications
- General stability and performance improvements plus the earlier version 10 features such as;
- Control palette to support new controls, features and integration
- Intelligent rulers to produce perfect layout with in-built designer hints
- Control painter to make it simple to apply identical properties to multiple controls
- In-place editing to enable changes exactly where you see them with single-click browser preview
- Designer zooming to make design consistent across all screen sizes
- Extended workspace to allow easy design enhancement of busy screens
- Device form size support to make designing for mobile devices a breeze

## New to version 10.1 – Open Display Files

The latest release of our IDE, Version 10.1, introduces Open Display Files. This breakthrough functionality solves the limitations of RPG by replacing restrictive DDS with an open-standards based XML format.

Open Display Files enable delivery of web, mobile, rich desktop, cloud services and other modern technology requirements for today and the future, while maintaining core support for existing RPG skills and source code.

### Highlights include:

- RPG supported across the entire solution, allowing interaction between the interface and RPG code
- Built in accordance with the Open Access Metadata Open Standard supported by IBM
- Open Display Files (OpenDSPF) incorporate a single coherent development environment
- Supports multiple clients types from green screen, mobile, browser clients, rich desktop, web services and more

# newlook version 10.1 overview

New toolbars – access to extensive functionality at the of a mouse-click

The rulers and smart-guides enable automated & intuitive layout of elements

Creating a graphical interface to your existing host records is as simple as dragging a host database field onto your form

Improved properties sheet make it easier to find and work with design elements

# Enhanced mobile & browser development

True multi-interface development from a single, unified and integrated designer.

Enhanced support for smartphones, tablets & browser delivery make it easier than ever to deliver high quality mobile solutions. Built-in device support for popular browsers, tablets and smartphones, including Apple iPhone, iPad and Android devices makes multi-channel development effortless.

Templates are provided that help with general layout tasks and styling, such as fonts, colors & spacing. Not only is this productive, it shields developers from having to learn & maintain HTML5 and CSS3 code.

## Highlights:

- Preset form sizes for popular devices including Apple iPhone, iPad, Android Phones and Tablets
- Toolbar enhancements to test deployment with lookserver with one-click
- Enhanced support for HTML5/CSS3

Preset device layouts for popular mobile devices

Mobile device preview

# Achieve the Impossible with RPG Open Access

RPG Open Access is now completely integrated into the core development suite with seamless switching between OA and non-OA applications. All new enhancements are leveraged within OA development too. RPG developers can take full advantage of all the features in Version 10.1, and can even control the behavior and layout from the RPG code itself. If the source is not available, it's not a problem since newlook can work with the underlying 5250 data-stream seamlessly.

## Highlights:

- Develop for both RPG OA and non-OA from within a single unified designer
- All new advanced features available to RPG OA developers
- Full support for rich, browser interfaces and mobile devices

Enhanced design surface available for OA and non-OA development

Founded in 1995, looksoftware is a leader in modernization of IBM i applications. The company offers a wide range of products and services designed to assist IBM i customers leverage their existing IBM i solutions to better solve their business problems.
