

**looksoftware announces lookserver 10. Powerful IBM i mobile and web apps. Easily.****Long Beach, California – September 24<sup>th</sup>, 2013**

looksoftware announces lookserver version 10, which delivers web and mobile interfaces for IBM i applications with more power and less complexity than ever before.

**Beauty that is more than skin deep**

Skins can be used to make your applications look better, but why stop there? Your skins should be easy to use but also allow you to create solutions that work better and exceed the expectations of your end users. lookserver 10 incorporates skins to enable easy and flexible management of user interface characteristics. Your application can now support Microsoft Internet Explorer, Google Chrome, Apple iPhone, iPad and Android devices with an optimized experience without changing the underlying source code in any way.

**HTML5 and CSS3 made easy**

lookserver 10 allows for control of custom CSS classes, HTML 5 input types and placeholder texts. This enables a much richer, optimal and intuitive experience for end users, especially when interacting with smaller devices like smartphones, where screen real estate is extremely limited.

**Simplicity, productivity and satisfaction with newlook 10**

lookserver 10 has been updated to take full advantage of newlook 10's designer. Both the initial development effort and ongoing maintenance is as simple as possible, yet allows developers to deliver beautiful interfaces and the capability to grow with the demands that often come from the users and management.

*"Too many IBM i customers feel that they have to choose between delivering quick results and providing quality solutions. With lookserver 10, you can leverage your existing skills and applications to ensure that you are delivering real value quickly whilst also providing the best quality architecture and user experience"* - Brendan Kay, CEO of looksoftware.

*"We have different users with different requirements and device types, and lookserver 10 allows us to deliver the right interface with minimal effort. We really benefit from the integration of looksoftware's technologies, so we can serve the diverse needs of our users from one development effort"* - Rod Riley, IT Director of Anthony Squires Menswear.

lookserver version 10 will be generally available on Oct 10, 2013. looksoftware will be hosting a webinar on October 10<sup>th</sup>, 2013 that will demonstrate the new features of lookserver 10. For more information, visit [www.looksoftware.com](http://www.looksoftware.com)
